

For Excellence in Data Protection

HexaLock™ CD-RX Media

The First Truly Copy Protectable CD-R

Introduction

HexaLock CD-RX media are specially made CD-R's that contain a pre-compiled session, which includes security elements that make the discs copy protectable. The program files¹ are linked to these security elements during the recording process, thus creating a copy-protected CD-R. HexaLock CD-RX is Orange Book compliant, thus ensuring excellent compatibility with standard CD recorders and readers.

Software developers, specialty publishers, government and military service providers and virtually anyone trying to copy protect smaller sized distribution runs are ideal candidates for CD-RX use.
